

Complete Summary

TITLE

Acute myocardial infarction (AMI): percentage of AMI patients who received thrombolytics during hospitalization.

SOURCE(S)

Canadian Cardiovascular Outcomes Research Team (CCORT). CCORT/CCS quality indicators: quality indicators for acute myocardial infarction (AMI) care. [internet]. Toronto (ON): Canadian Cardiovascular Outcomes Research Team (CCORT); 2003 [cited 2004 Mar 31]. [various]. [6 references]

Brief Abstract

DESCRIPTION

This measure assesses the percentage of acute myocardial infarction (AMI) patients who received reperfusion with thrombolytics during hospitalization.

RATIONALE

Cardiovascular disease continues to claim the lives of many Canadians and creates enormous disability for those who survive. While considerable progress has been made in developing effective treatment and therapies, significant opportunities remain to improve the quality of cardiac care provided for the benefit of all Canadians.

The combined results of laboratory and clinical research have identified specific clinical strategies that are beneficial for both initial treatment and secondary prevention of acute myocardial infarction (AMI). These therapies include the use of acetylsalicylic acid (ASA), thrombolytics, beta-blockers, angiotensin-converting enzyme (ACE) inhibitors and statins for AMI. However, these proven therapies are often being underutilized in routine clinical practice in Ontario and Canada and there is wide inter-hospital variation in their use. Increasing use of these therapies could lead to significant reduction in the mortality rate associated with these conditions.

A set of Canadian quality indicators for the care of AMI patients has been established. It is anticipated that these indicators will be useful to clinicians and

researchers who want to measure and improve the quality of AMI patient care in Canada.

PRIMARY CLINICAL COMPONENT

Acute myocardial infarction; reperfusion with thrombolytics

DENOMINATOR DESCRIPTION

Patients with a confirmed acute myocardial infarction (AMI) (see the related "Denominator Inclusions/Exclusions" field in the Complete Summary)

NUMERATOR DESCRIPTION

Patients from the denominator who received reperfusion with thrombolytics during hospitalization

Evidence Supporting the Measure

PRIMARY MEASURE DOMAIN

Process

SECONDARY MEASURE DOMAIN

Not applicable

EVIDENCE SUPPORTING THE MEASURE

A formal consensus procedure involving experts in relevant clinical, methodological, and organizational sciences

Evidence Supporting Need for the Measure

NEED FOR THE MEASURE

Use of this measure to improve performance
Wide variation in quality for the performance measured

EVIDENCE SUPPORTING NEED FOR THE MEASURE

Canadian Cardiovascular Outcomes Research Team (CCORT). Quality of cardiac care in Ontario. EFFECT (Enhanced Feedback for Effective Cardiac Treatment) study -- Phase I. Report 1. Toronto (ON): Canadian Cardiovascular Outcomes Research Team (CCORT); 2004 Jan. 66 p.

State of Use of the Measure

STATE OF USE

Current routine use

CURRENT USE

Internal quality improvement
Quality of care research

Application of Measure in its Current Use

CARE SETTING

Hospitals

PROFESSIONALS RESPONSIBLE FOR HEALTH CARE

Physicians

LOWEST LEVEL OF HEALTH CARE DELIVERY ADDRESSED

Single Health Care Delivery Organizations

TARGET POPULATION AGE

Age 20 to 105 years

TARGET POPULATION GENDER

Either male or female

STRATIFICATION BY VULNERABLE POPULATIONS

Unspecified

Characteristics of the Primary Clinical Component

INCIDENCE/PREVALENCE

At present, approximately 3% of all Canadians aged 35 to 64 years report having heart disease.

EVIDENCE FOR INCIDENCE/PREVALENCE

Canadian Cardiovascular Outcomes Research Team (CCORT). Quality of cardiac care in Ontario. EFFECT (Enhanced Feedback for Effective Cardiac Treatment) study -- Phase I. Report 1. Toronto (ON): Canadian Cardiovascular Outcomes Research Team (CCORT); 2004 Jan. 66 p.

ASSOCIATION WITH VULNERABLE POPULATIONS

Unspecified

BURDEN OF ILLNESS

- Cardiovascular disease (CVD) is the leading cause of death in Canada, claiming over 78,000 lives (roughly 36% of all deaths) in Canada each year.
- Approximately 38,000 Canadians were hospitalized with acute myocardial infarction (AMI/heart attack) in 1996 - of these about 15% died within 30 days of the event and 23% died within one year. Many AMI patients who survive their index hospitalization go on to develop congestive heart failure. Hospitalized heart failure patients have an even worse prognosis, with a one-year mortality rate of 33% - worse than that of most malignancies.
- CVD also represents enormous disability, with over 30% of those who report they have heart disease being unable to work due to their illness.

EVIDENCE FOR BURDEN OF ILLNESS

Canadian Cardiovascular Outcomes Research Team (CCORT). Quality of cardiac care in Ontario. EFFECT (Enhanced Feedback for Effective Cardiac Treatment) study -- Phase I. Report 1. Toronto (ON): Canadian Cardiovascular Outcomes Research Team (CCORT); 2004 Jan. 66 p.

UTILIZATION

Cardiovascular disease (CVD) accounts for 18% of all hospitalizations among men and women - more than any other health problem.

EVIDENCE FOR UTILIZATION

Canadian Cardiovascular Outcomes Research Team (CCORT). Quality of cardiac care in Ontario. EFFECT (Enhanced Feedback for Effective Cardiac Treatment) study -- Phase I. Report 1. Toronto (ON): Canadian Cardiovascular Outcomes Research Team (CCORT); 2004 Jan. 66 p.

COSTS

The economic burden of cardiovascular disease (CVD) on the health care system is considerable and growing. In 1998, the estimated costs were approximately \$19 billion, comprised of \$6.8 billion in direct costs, plus \$11.6 billion in indirect costs. This figure is expected to increase as the population continues to age.

EVIDENCE FOR COSTS

Canadian Cardiovascular Outcomes Research Team (CCORT). Quality of cardiac care in Ontario. EFFECT (Enhanced Feedback for Effective Cardiac Treatment) study -- Phase I. Report 1. Toronto (ON): Canadian Cardiovascular Outcomes Research Team (CCORT); 2004 Jan. 66 p.

Data Collection for the Measure

CASE FINDING

Users of care only

DESCRIPTION OF CASE FINDING

Inclusions

Patients with confirmed acute myocardial infarction (AMI):

- Most responsible diagnosis of AMI (International Classification of Diseases, Ninth Revision [ICD-9] code 410)
- European Society of Cardiology/American College of Cardiology (ESC/ACC) clinical criteria indicating myocardial infarction (MI) (electrocardiogram changes, symptoms, enzymes)
- Timing of the MI - must have occurred before the patient arrived at hospital

Exclusions

- Not admitted to an acute care hospital
- Age less than 20 or greater than 105 years
- Invalid health card number
- Admitted to non-cardiac surgical service
- Transferred from another acute care facility
- AMI coded as an in-hospital complication
- AMI admission within the past year

DENOMINATOR SAMPLING FRAME

Patients associated with provider

DENOMINATOR (INDEX) EVENT

Clinical Condition
Institutionalization

DENOMINATOR INCLUSIONS/EXCLUSIONS

Inclusions

Patients with confirmed acute myocardial infarction (AMI) who met case definition criteria (see the "Description of Case Finding" field), with ST segment elevation on initial electrocardiogram (ECG)*, or left bundle branch block (LBBB) on initial ECG

Note: *For this indicator, the determination of a ST-segment elevation myocardial infarction (STEMI) should be applied using the following criteria, ST-segment elevation: new or presumed new ST-segment elevation at the J-point in two or more contiguous leads with the cut-off points greater than or equal to 0.2 mV in leads V1, V2, or V3 or greater than or equal to 0.1 mV in other leads or left bundle branch block.

Exclusions

- Did not have chest pain or other AMI symptoms less than 12 hours prior to hospital arrival
- Active (any) bleeding on admission
- Recent surgery in the past month
- Recent trauma in the past month
- Recent cardiopulmonary resuscitation (e.g., over 10 minutes occurring at six hours prior to or at time of hospital arrival)
- History of coagulopathy
- History of stroke
- Physician documented reason for non-use of thrombolytics (e.g., cancer, severe uncontrolled hypertension, patient refusal)

NUMERATOR INCLUSIONS/EXCLUSIONS

Inclusions

Patients from the denominator who received reperfusion with thrombolytics during hospitalization

Exclusions

Unspecified

DENOMINATOR TIME WINDOW

Time window precedes index event
